\$.phono()

Phono is a simple jQuery plugin and JavaScript library that turns any web browser into a phone; capable of making phone calls and sending instant messages. You can even connect to SIP clients; all with a simple unified API.

[Learn How](#)[Sign Up for an API Key](#)[or login](#)

Phone Calls

Make and receive phone calls directly in your browser using your existing JavaScript skillz. All it takes is a few lines of code!

Try It!

☐ Wearing a headset?[Call](#)

IM/Chat

Phono also acts as an XMPP client capable of sending and receiving IM messages to and from any XMPP/Google Talk user

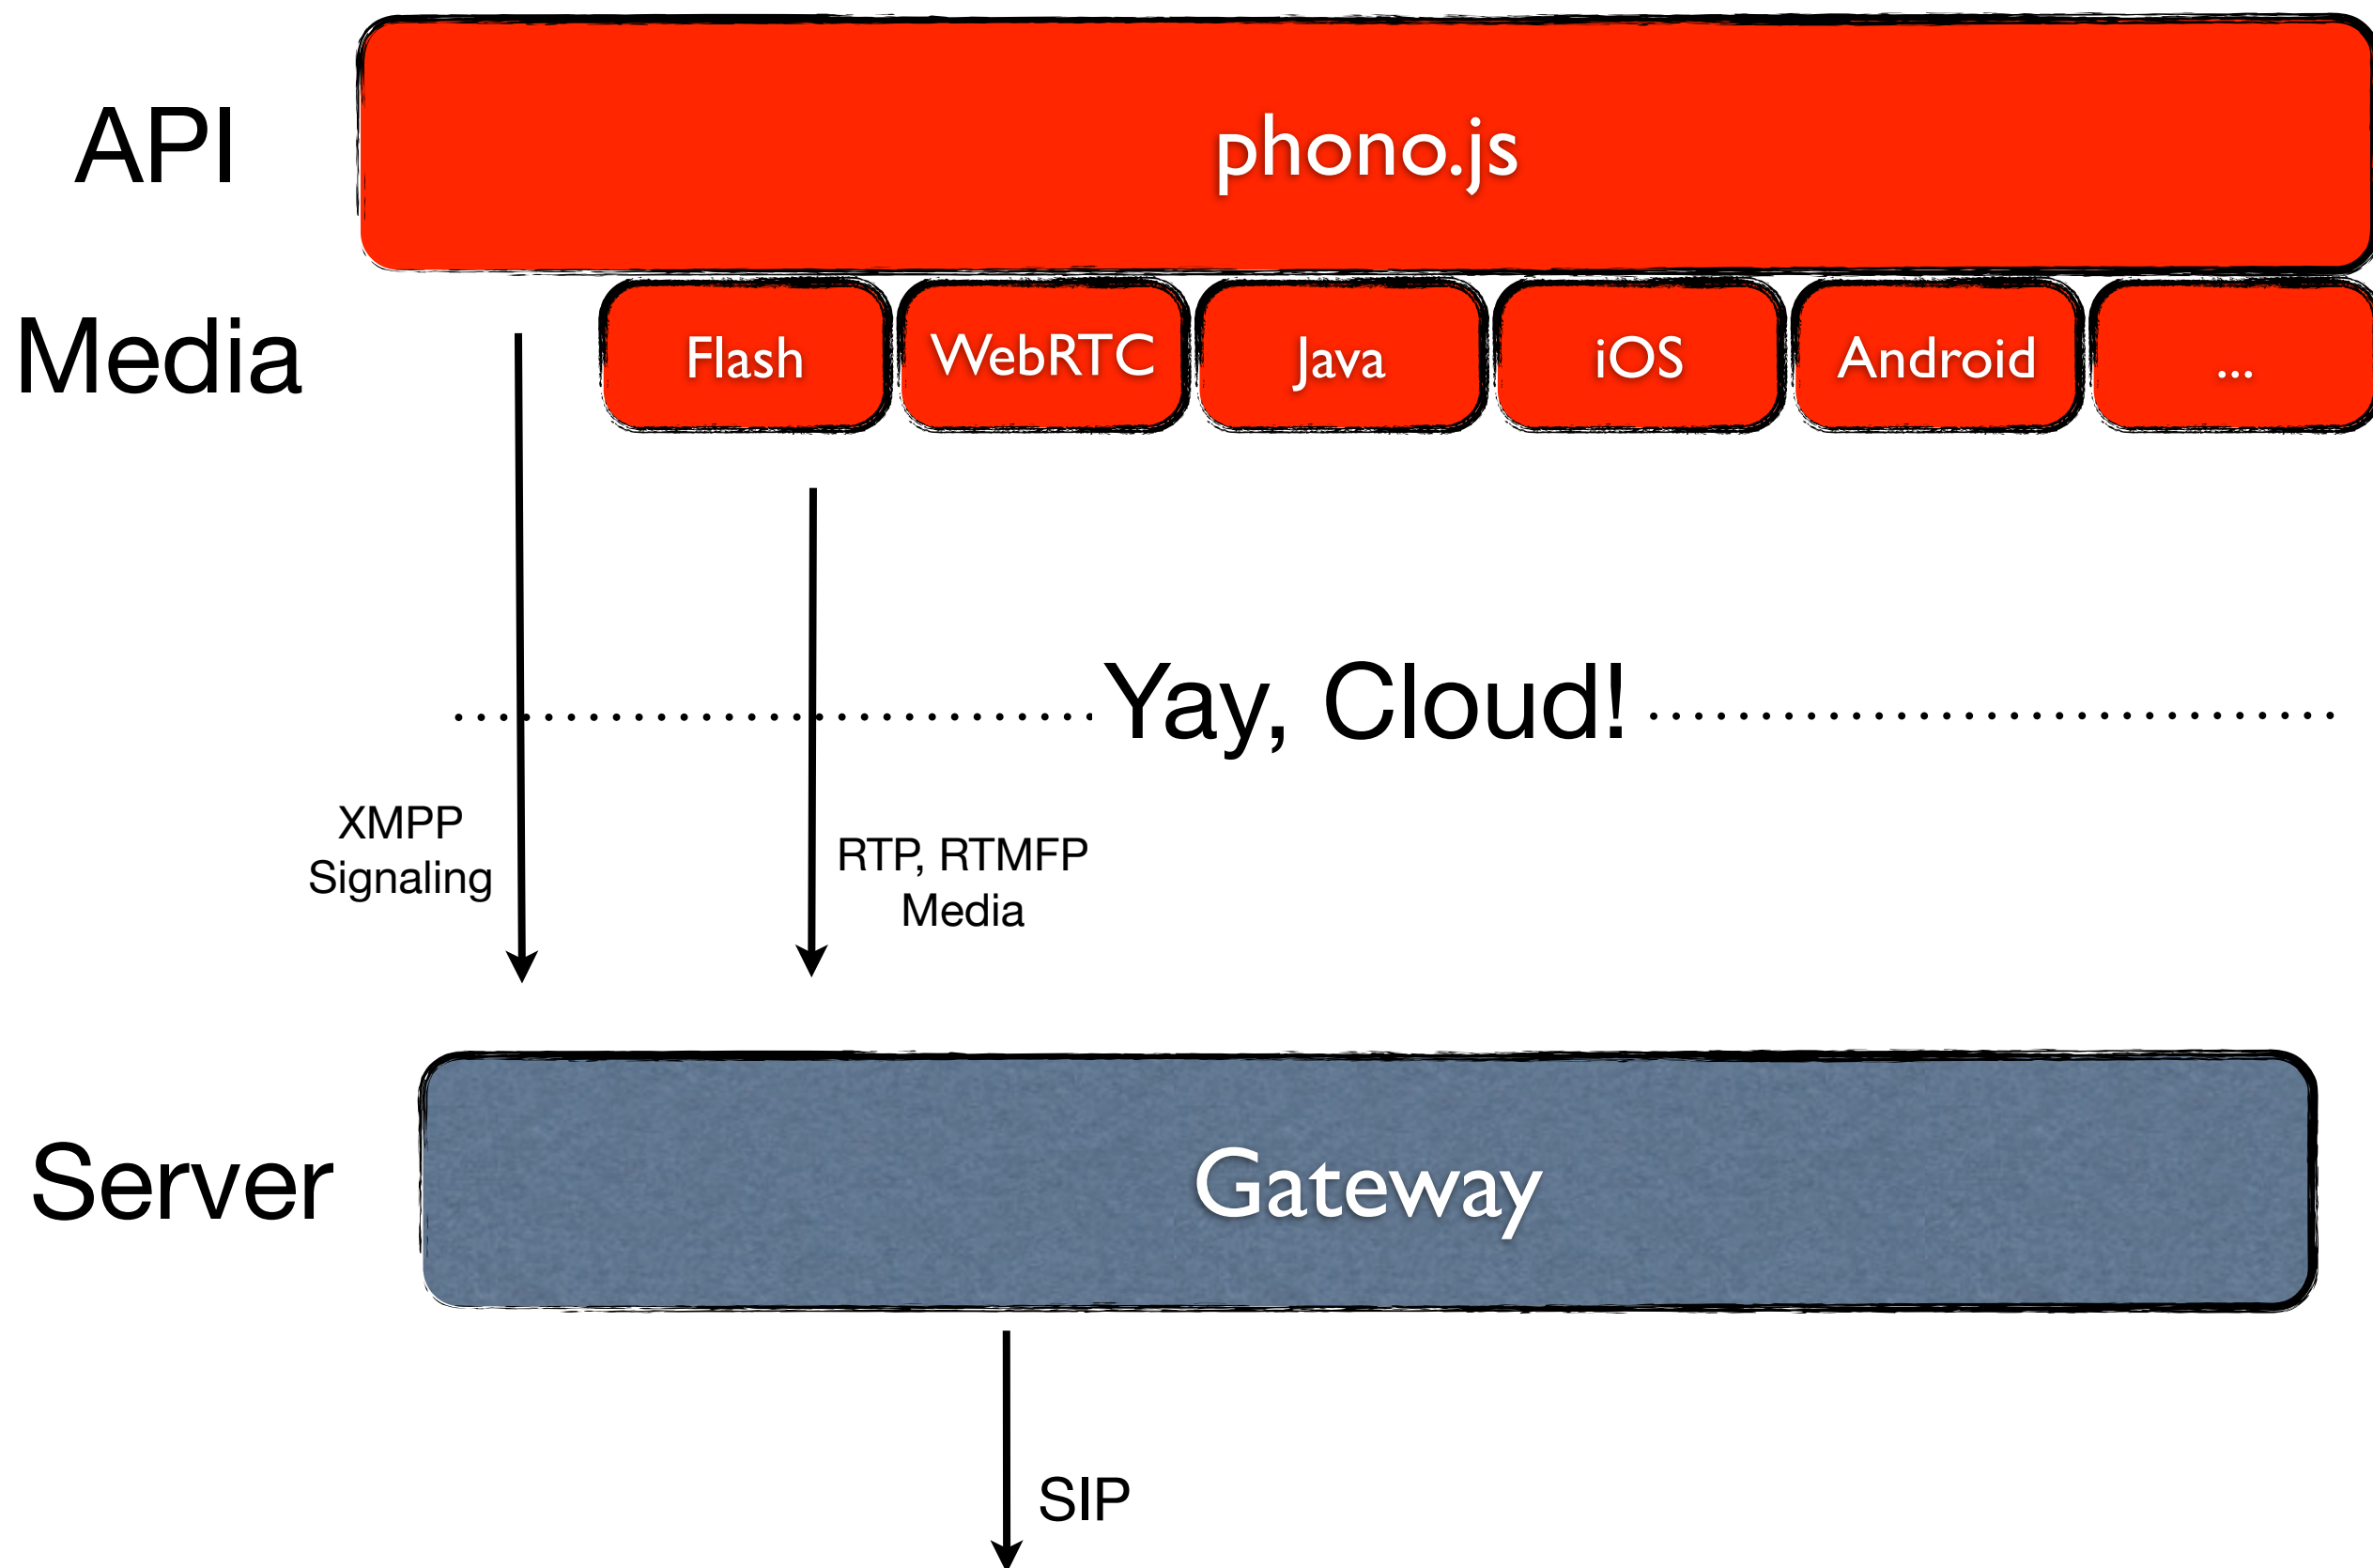

HTML

Turn any **web browser** or **mobile app**
into a phone or chat client

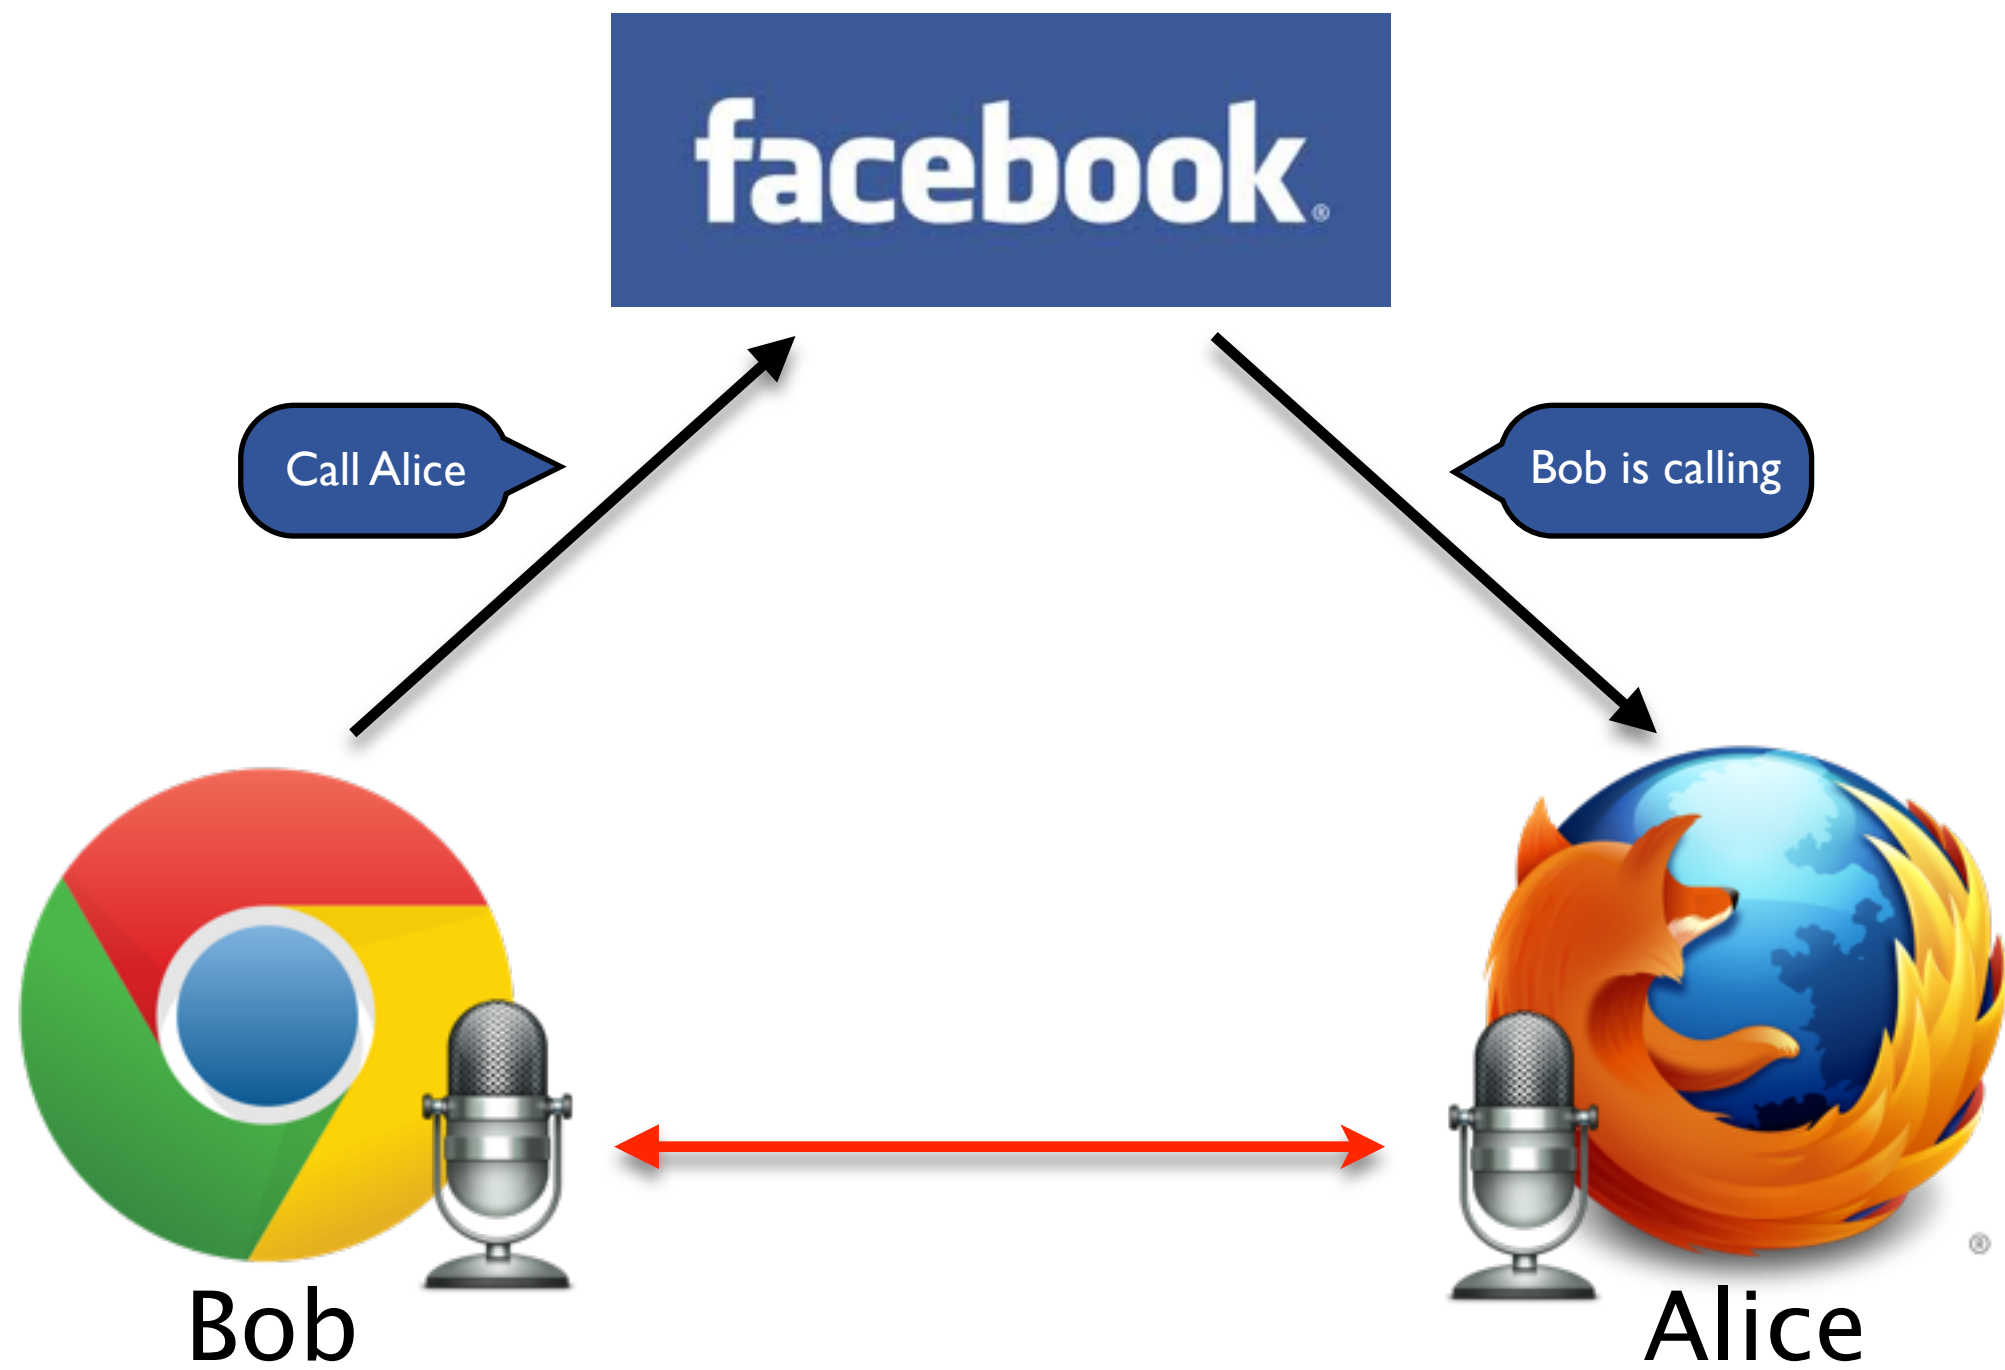

```
$.phono({  
  onReady: function() {  
    this.phone.dial("sip:alice@example.com")  
  }  
})
```

- Oct 2011 - Flash, jquery
- July 2011 - Mobile with PhoneGap
- Dec 2011 - Java
- Feb 2012 - WebRTC demo
- July 2012 - RTMFP
- Nov 2012 - WebRTC conference
- Jan 2012 - AT&T Developer summit
- Feb 2012 - Native mobile

Capabilities

Why Phono?

Get quick access to human translators using this innovative mobile application or get paid to be a translator in your spare time!

**Blue Cross
Blue Shield**

With BCBS's new claim system you can now connect directly with an insurance professional from the BCBS website.
